EXAMINATION & FILE DETAILS

Study Type : Cutaneous Lesion / Mole Analysis (ABCD Criteria)
Source File : 1791719413625-4qob1du.jpg
Date & Time : 11 Oct 2026 at 05:32 PM

REVIEW RECOMMENDED

Findings identified outside normal limits. Qualified medical clinician review is advised.

EXECUTIVE CLINICAL SUMMARY

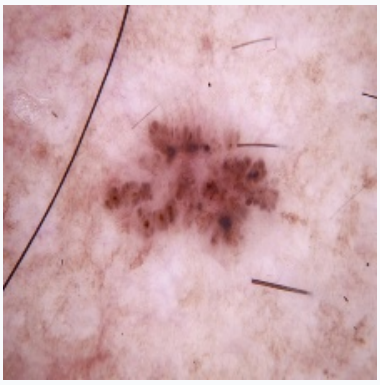

- Asymmetry score: 1.03/2.0; Border contour score: 5.62/8.0.
- Color analysis identified 3 pigment shades: Dark brown / black, Light brown / tan, Red / erythematous hue.
- Estimated major lesion diameter: 5.6 mm.

NOTABLE OBSERVATIONS REQUIRING REVIEW:

& Elevated asymmetry score across principal lesion axis

& Border notch / irregular contour gradient

SOURCE IMAGE CAPTURE

Analyzed Capture: 1791719413625-4qob1du.

PRELIMINARY AI CLINICAL IMPRESSION

Dermoscopic evaluation identified notable structural criteria (Elevated asymmetry score across principal lesion axis, Border notch / irregular contour gradient, Multiple pigment shades detected (3 colors)). In-person clinical dermatoscopy and total-body skin examination by a qualified dermatologist are recommended.

IMPORTANT MEDICAL DISCLAIMER

MedFusion AI provides AI-assisted personal health informational analysis. It does not provide medical diagnosis, prescribe treatments, or replace a doctor. Always consult a qualified medical professional for health decisions. This is a demo report with synthetic/example data.

DETAILED CLINICAL ANALYSIS — EXAMINATION FINDINGS

Ref: MF-2026-3TMUQJ | Study: Cutaneous Lesion / Mole Analysis (ABCD Criteria)

The following structured table enumerates parameters, anatomical regions, and biomarker values evaluated by the analysis pipeline.

PARAMETER / REGION	OBSERVED RESULT / MEASUREMENT	REFERENCE CRITERIA	STATUS
A - Asymmetry Index	1.03 / 2.0 (Axis ratio: 1.69)	< 1.0 (Bilateral axial symmetry)	Review Required
B - Border Irregularity	5.62 / 8.0 (Circularity: 3.55)	< 3.0 (Smooth, circumscribed edge)	Review Required
C - Color Variegation	3 shades (Dark brown / black, Light brown / tan, Red / erythematous hue)	1 - 2 uniform pigment shades	Review Required
D - Estimated Diameter	5.6 mm (124 px)	< 6.0 mm (Pencil eraser benchmark)	Within Limits
Surface Pattern & Texture	Homogeneous reticular network	Regular pigment network	Within Limits
Image Technical Quality	Optimal	Sharp focus, even illumination	Adequate

TECHNICAL QUALITY METRICS & MEASUREMENT SPECIFICATIONS

Image Dimensions: 224 × 224 px (Aspect Ratio: 1)

Sharpness Variance (Laplacian): 559.6 | Contrast Standard Deviation: 32.5

Mean Luminance Level: 177.5 / 255 | Overall Technical Grade: Optimal

Quality Note: No technical degradation, extreme under/over exposure, or severe motion artifacts detected.

Limitations: Automated quality scoring reflects 2D sensor capture and does not guarantee complete diagnostic visibility of microscopic features.

NUMERICAL MEASUREMENTS & ALGORITHMIC INDICES

ASYMMETRY SCORE:	1.03
BORDER SCORE:	5.62
COLOR COUNT:	3
ESTIMATED DIAMETER MM:	5.6

1. EVIDENCE-BASED SYNTHESIS & UNCERTAINTY ANALYSIS

Dermoscopic evaluation identified notable structural criteria (Elevated asymmetry score across principal lesion axis, Border notch / irregular contour gradient, Multiple pigment shades detected (3 colors)). In-person clinical dermatoscopy and total-body skin examination by a qualified dermatologist are recommended.

Uncertainty Context: Visual photography cannot replace histological pathology or biopsy. Dermatoscope illumination artifacts and magnification scaling can impact measurements.

2. CLINICAL NEXT STEPS & FOLLOW-UP TIMELINE

1. Schedule evaluation with a dermatologist for dermoscopy and dermpath review.
2. Perform monthly self-monitoring for any changes in size, shape, or color (ABCDE evolution).
3. Protect skin from UV exposure with broad-spectrum SPF 30+ sunscreen.

3. RED-FLAG WARNING SIGNS (SEEK IMMEDIATE EMERGENCY CARE)

- &¡ Severe or acute chest pain, sudden difficulty breathing, coughing up blood (hemoptysis).
- &¡ High fever (> 102°F / 38.9°C), severe dizziness, confusion, or sudden altered mental status.
- &¡ Rapidly growing, bleeding, or ulcerating skin lesion with jagged asymmetric boundaries.
- &¡ Extreme lethargy, pale clammy skin, or signs of severe dehydration / sepsis.
